REASONS FOR ALLOWANCE

When considered as a whole and in light of the specification, claims 1-8, 10-23 are allowable over the art of record.

The following is an examiner's statement of reasons for allowance:

As to independent claims 1, 11, and 19:

The closest prior art of DiStefano, III (US6771291) discloses a system, corresponding method, and corresponding computer-readable medium, for generating a user interface for a web application program, comprising:

- a repository (in 190 or 170 for example) of reusable screen components including graphical user interface (GUI) components stored in a computer-readable medium (figure 2 shows GUI components used for example);

- means for enabling a user to create a web page layout by (method of designing, see abstract for example);

- selecting GUI components from the repository (see column 5 lines 12-14, lines 37-38 for example),

- arranging the selected GUI components within the web page (see column 6 lines 3-7, lines 26-27 for example),

- defining interaction between at least two of the selected GUI components, the interaction including causing a first GUI component to perform an action in response to an event generated by a second GUI component (selecting a web assets color and sound, see column 7 lines 25-34, lines 41-46, for example), and

- defining interaction between one or more of the selected GUI components (e.g., banner) and the web application program (e.g., sticky pad), the interaction involving transactional business data (e.g., advertising) and one or more backend systems (e.g., advertising tracking system) wherein the selected GUI components (e.g., banner) contain transactional business data (e.g., information on a user's website) and inherit properties specific to the one or more selected GUI components (e.g., the banner inherits its

Art Unit: 2175

design) from a user interface framework (see column 9, lines 35-49; column 11 lines 40-43, column 12 lines 35-38 for example); and

means for storing rendering information of the web page layout to enable a web server to render the web page ("GUI is stored", see column 5 line 2 for example).

As to independent claim 8:

The closest prior art of DiStefano, III (US6771291) discloses a system for generating a user interface for a web application program, the system comprising:

a first set of database tables to define screens, the first set of database tables being stored in a computer-readable storage medium and including one or more tables that describe graphical user interface (GUI) screen components, screen layout, component configuration, application model assignment, and event handling (fig. 1, el. 170; col. 4, l. 34-41) (e.g., web assets database stores assets used to develop a website);

a first set of transactions for administering the first set of database tables, the first set of transactions being stored in a computer-readable storage medium (inherent, databases must have set of transactions for administration); and

means for generating web pages by accessing the first set of database tables using the first set of transactions, wherein accessing the first set of database tables includes accessing information relating to at least one of the GUI screen components and event handling (col. 4, l. 65-67; col. 5, l. 25-40) (creating a website using web assets); and

a second set of database tables (fig. 1, el. 190 for example) based upon the first set of stored database tables, the second set of stored database tables being stored on a computer-readable storage medium and configured for customization and personalization of the user interface (see items 170 or 190, figure 2, and abstract, column 6 lines 3-7, lines 26-27, column 5 lines 12-14, line 37-38, column 7 lines 25-34 for example) (storage, see column 2 lines 35-40, column 4 lines 42-44, column 5 line 2 and column 18 lines 60-63 for example) wherein a graphical user interface (GUI) screen component in the second set of database tables inherits properties specific to one or more graphical user interface (GUI) components in

Art Unit: 2175

the first set of database tables from a user interface framework and applies at least one inherited property from among the inherited properties to the graphical user interface screen component (GUI) in the second set of database tables during the customization and personalization of the user interface (col. 5, l. 1-17) (e.g., nearly all of the programming required to operate a GUI, as defined using the web assets from web assets database 170, is stored on programming database 190).

However, DiStefano does not teach: establishing a relationship between properties of the GUI components, business data and one or more backend systems, wherein GUI components are assigned to a specialized class and a non-specialized class and, wherein establishing the relationship by the first set of transactions includes generating the specialized class of GUI components; wherein the inheriting causes at least one object of a GUI component assigned to a specialized class inherited from the super class to have the property of the super class, and wherein GUI components assigned to the non-specialized class do not inherit properties of the super class.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jordany Núñez whose telephone number is (571)272-2753. The examiner can normally be reached on Monday Through Thursday 9am-7:30pm.
